

SUBMISSION PACKAGE

Smart Document Assistant • Technical Assessment Deliverables

1. Deliverables & Links

GitHub Repository (Source Code)

[Paste your GitHub Repository URL here]

Demo & Explanation Video (5-8 min)

[Paste your Video Link here]

Architecture Diagram

Included in README.md / Root directory

Sample Documents

[Paste link to ZIP or specify local folder]

2. Environment Configuration

The application requires the following variables in the .env file to run successfully with the designated LLM endpoints.

.ENV

```
GROQ_API_KEY="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"
GROQ_MODEL="openai/gpt-oss-20b"
```

3. Design Decisions & Setup Instructions

- Setup Instructions:** Comprehensive instructions for installing dependencies, configuring the environment, and running the application are located in the repository's README.md.
- Design Decisions:** System architecture, technology choices (FAISS, Groq, HashingVectorizer), and the rationale behind the RAG pipeline structure are fully detailed in the README.md.

4. Estimated Time Allocation (8 Hours Total)

Phase	Tasks Completed	Time Spent
Planning & Setup	Initial repository setup, architecture design, and environment configuration.	1.0 Hour
Data Pipeline	Document uploading, parsing, text chunking, and embedding generation logic.	2.5 Hours
Core Application	Implementing FAISS retrieval, Groq query rewrites,	2.5 Hours
